

TRIBOND

Sticker, Spreader & Activator

Tribond is a unique formulation of non-ionic surfactant. It is having tri-functional activity of Emulsification, Spreading & Activation. It is having neutral pH of 7, hence compatible with almost all pesticides and herbicides.

Contents:

Conc. Non-ionic Surfactant	:	35%
Solvent (Water)	:	65%
Total	:	100%

Mode Of Action:

Tribond can be applied with herbicides and pesticides for better performance and coverage. Coverage of leaf surface, retention on leaf surface, penetration of post-emergent herbicides reduces surface tension of water, faster penetration of water into soil, less water loss due to evaporation, less water loss due to run off.

More efficient use of water for better crop yields concentrate has been used for years by growers who recognize its unique qualities and versatility. Tribond can also help maximize weed control by providing more uniform spray deposit on plants. It improves coverage of herbicides, insecticides and fungicide sprays. As an activator, its thorough wetting action helps improve performance of post-emergent herbicides, insecticides and fungicides. Also it can be used on growing and harvested crops. It helps alleviate costly down time. It is non-corrosive and biodegradable. It also increases water penetration by getting more water into the soil. Tribond aids irrigation by increasing the rate at which water soaks into soil, and it promotes more efficient water usage. Also, it aids irrigation by reducing run-off, so it saves water.

Recommendation Dose:

With Herbicides: 1ml/lit of water

Insecticides/Fungicides: 0.3ml/lit of spray solution

Irrigation Aid: 0.5lt/acre
